Seven of 10 business-relevant routes came in above what those routes normally cost

Prepared for Richmond BizSense · 255 graded fares out of RIC · August 17 – October 19, 2026

255	64	10	7
FARES GRADED	DAYS TRACKED	BUSINESS-RELEVANT	ABOVE NORMAL

Business-relevant routes out of RIC, against their own normal price

Every fare is compared with what that specific route normally costs, so a $289 New York ticket and an $837 London ticket can be judged on the same scale. Navy means the observed fares averaged above that route's normal price.

The contrast with leisure-oriented routes

Several leisure-oriented routes produced stronger values than the business-relevant routes in this analysis.

BUSINESS-RELEVANT — ABOVE NORMAL		LEISURE-ORIENTED — BELOW NORMAL	
New York (JFK)	**26% above**	Orlando	**41% below · from $52**
Chicago (Midway)	**20% above**	Charleston	**37% below · from $98**
New York (LaGuardia)	**16% above**	Tampa	**29% below · from $103**
Chicago (O'Hare)	**14% above**	Nashville	**26% below · from $127**
London (Heathrow)	**5% above**	Fort Myers	**21% below · from $128**

Method. Each fare is graded against what that specific route normally costs, not a flat dollar threshold. Figures above are averages across every fare observed on each route between August 17 and October 19, 2026. The 10 routes shown were selected as business-relevant for this analysis; the dataset does not identify which routes any company books. Fare-level data available on request, including the normal price for each route so any figure here can be checked.

Caveats. These are fares observed over 64 days, not every fare that existed. Prices are accurate as of the date each was found. 64 days is a real sample but not a seasonal one, and these routes may price differently around holidays.
